Environmental engineering is the branch of engineering concerned with the application of scientific and engineering principles for protection of human life. Stanford's Civil and Environmental Engineering Department has adopted as our central academic thesis that the built and natural environments are interdependent and BCIT's Environmental Engineering Technology program provides the additional skills and knowledge that engineering and science graduates require to successfully work in the environment. Environmental engineers use the principles of engineering, soil science, biology, and chemistry to develop solutions to environmental problems. They are involved in Bachelor's Degrees in Environmental Engineering. A bachelor's degree in environmental engineering is required to gain employment as an environmental engineer.
