A virus is a small infectious agent that replicates only inside the living cells of other organisms. Viruses can infect all types of life forms, from animals and plants to microorganisms. The history of virology – the scientific study of viruses and the infections they cause – began in the closing years of the 19th century. Although Louis Pasteur is often credited with the discovery of viruses, it was actually Dmitri Ivanovsky and Wendell Stanley who first identified and purified a virus. In the search for extraterrestrial life, we look for planets at a similar distance from their sun as Earth is from ours: the so-called Goldilocks zone. The double-stranded RNA-dependent protein kinase PKR is a critical mediator of the antiproliferative and antiviral effects exerted by interferons. Not only is PKR an important component of the innate immune system, but it also plays a role in the pathogenesis of several viral infections. Infectious hematopoietic necrosis virus (IHN), a member of the Rhabdoviridae family, is the causative agent of infectious hematopoietic necrosis (IHN), a disease notifiable to
