Before unification in 1940, the government of New York City made plans for expanding the subway system, under a plan referred to in contemporary newspaper articles as the "City Plan of 1929". The plan was a comprehensive study of the city's transportation needs, and it was the first time that a city government had taken such a long-term view of its transportation future. The plan was a landmark in the history of urban transportation planning, and it laid the foundation for the modern transit system that we know today.
